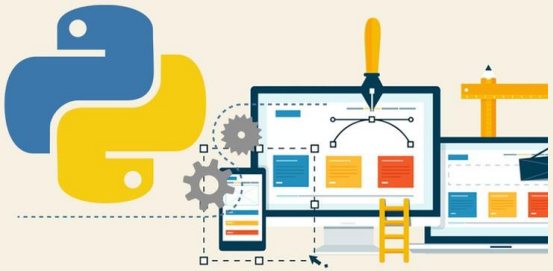
# Loops

## (Execute a block of code many times)



# Python Scripting for Automation

*(Automate your repetitive tasks with python scripting)*

## Why Loops:

All programming languages need a way to execute  block of code many times, this is possible with loops.

Python has two types of loops:

- for loop
- while loop

## for loop:

The for loop in Python is used to iterate over a sequence (list, tuple, string) or other iterable objects.

## while loop:

while loop is used to execute a block of statements repeatedly until a given a condition is satisfied.

# Working with for loop

# Thank you
