

## ***Practice:***

***read a directory path and identify all files and directory***

## **Python Scripting for Automation**

***(Automate your repetitive tasks with python scripting)***

**Thank you**

## What is a module ?

A module is a file containing Python definitions and statements. That means, module containing python functions, classes and variables.

## What is the use of module ?

- Reusability

Note: If script name is **mymodule.py** then module name is **mymodule**

## Types of Python Modules:

- Default Modules
- Third Party Modules

**Import either default or third party modules before using them.**
