

# findall and finditer operations of re module

## Python Scripting for Automation

*(Automate your repetitive tasks with python scripting)*

## findall operation of re module:

- It looks throughout the entire string for all matches and returns list of matches.
- `re.findall(pattern, string, flags)`

## finditer operation of re module:

- It looks throughout the entire string for all matches and returns a objects for all matches.
- `re.finditer(pattern, string, flags)`

**Thank you**
