

Practice:

read a path and Check if given path is a file or a directory path

Python Scripting for Automation

(Automate your repetitive tasks with python scripting)

Thank you

What is a module ?

A module is a file containing Python definitions and statements. That means, module containing python functions, classes and variables.

What is the use of module ?

- Reusability

Note: If script name is **mymodule.py** then module name is **mymodule**

Types of Python Modules:

- Default Modules
- Third Party Modules

Import either default or third party modules before using them.
