

search and match operations of re module

# Python Scripting for Automation

*(Automate your repetitive tasks with python scripting)*

## search operation of re module:

- It looks throughout the entire string and returns the first match.
- `re.search(pattern, string, flags)`

## match operation of re module:

- It looks only at the starting of a string for a match.
- `re.match(pattern, string, flags)`

**Thank you**
