Introduction to Modules of Python

Python Scripting for Automation
(Automate your repetitive tasks with python scripting)

What is a module ?

A module is a file containing Python definitions and statements. That means, module containing python functions, classes and variables.

What is the use of module ?

➢ **Reusability**

Note: If script name is mymodule.py then module name is mymodule

Types of Python Modules:

➢ **Default Modules**
➢ **Third Party Modules**

Import either default or third party modules before using them.

Different ways to import module:

Using import math

Using from:
    from math import *
    from math import pi,pow

Thank you
