How to define a Function and use defined Function ?

Python Scripting for Automation
(Automate your repetitive tasks with python scripting)

Function:

- A function is a block of code for some specific operation.
- Function code is re-usable.
- It will execute only when it is called.

Why Function are used ?

- Code Reusability
- Improve Modularity

Types of Functions:

Basically, we can divide functions into the following two types:

Built-in Functions:

Functions that are built into Python.

User-Defined Functions:

Functions defined by the users themselves

Thank you
